

The Bottom Line

The Bottom Line is our weekly publication. It wraps up the week, highlighting key events and data releases for the upcoming one

Focus on eurozone inflation and US payrolls

28 August 2026

Next week's economic calendar foresees two important data releases: in the eurozone, the August inflation data will reveal a substantial increase in the headline reading due to higher energy prices, and in the US, the labour market report is expected to show some improvement. Separately, RBNZ is expected to tighten its policy by 25bp, while BoC should stay on sidelines.

TOP STORIES OF THE UPCOMING WEEK

1 Eurozone inflation likely to rise well above 3%

We forecast a large increase in eurozone inflation for August, to 3.4% yoy from 2.9%, the highest reading since September 2023. The acceleration has likely been driven by energy, which we think has added 0.4pp to the headline inflation rate, mainly due to a jump in the price of oil products as upward pressure on Brent prices is compounded by rising refining margins. We have also pencilled in further increases in electricity and natural gas bills. Core inflation has likely remained at 2.5% yoy, with the usual uncertainty related to potentially large seasonal swings in the prices of holiday-related services. Food inflation has likely reaccelerated somewhat from a low level, although we expect it to have remained subdued at around 1%. We have pencilled in pressure on unprocessed items stemming from unusually hot and dry summer weather, while the processed component is likely to have remained well behaved. Looking ahead, we see headline inflation hovering around 3.5% for the rest of the year, with core inflation at or just above 2.5%.

2 US payroll weakness appears overdone, we expect an improvement

The US labour market showed clear weakness in June-July, recording cumulatively flat payrolls growth and a 0.2pp decline in the unemployment rate to 4.1%, fully driven by falling participation. We suspect that the hiring data depict an overly pessimistic picture of the US economy, explained by a sizeable drag of the government sector that is unlikely to last for long and, possibly, some issues related to seasonal adjustment.

The average 30k increase in private employment over the last two months suggests that the labour market is anaemic but is not falling off a cliff. We expect August to show some recovery in job creation and have pencilled in a moderate rebound by 80k, with the unemployment rate picking up to 4.2% if some of the recent substantial (and suspicious) weakness in participation is reversed. At a sector level, we will closely monitor financial activities. Payrolls here have declined for most of the past year, and a continuation of this trend might suggest that AI adoption is playing a role. Overall, the US economy remains in good shape but with only one growth engine – AI, which is fuelling investment and, indirectly, consumption through wealth effects. Going forward, we expect firms to remain cautious regarding hiring amid high energy prices and uncertainty about how AI will affect staffing needs.

3 The RBNZ is set to hike rates further; BoC on hold

Both the Reserve Bank of New Zealand (RBNZ) and the Bank of Canada (BoC) will meet on Wednesday. The policy rate will likely rise again in New Zealand, as the RBNZ is expected to deliver another 25bp rate hike to 2.75% after a similar move in July. By contrast, rates in Canada should stay at 2.25%. The RBNZ seems to be the bolder major central bank with respect to tightening, as rates are too low in New Zealand, with forwards pricing in a total of 50bp and 100bp of new tightening by 4Q26 and 4Q27, respectively. Resuming tariff tensions with the US call for a cautious approach by the BoC. Both outcomes are sufficiently priced in, with the NZD and the CAD expected to further benefit from the current USD retreat.

QUOTE OF THE WEEK*

“It is time for superpowers to understand the limits of their power.”

Antonio Guterres, United Nations Secretary-General

* Not an endorsement.

WHAT WE ARE READING

[The multiplying risks of financing data centres >](#)

This *FT* article discusses the risks of the huge capex spent on data centres, including longevity, i.e. that the data centres and their equipment will become obsolete due to innovation, or that the AI revolution will not meet its potential. Moreover, the article highlights the limits of insurers' capabilities and their balance sheets.

[Goeconomics, Rediscovered >](#)

In this article published in the IMF's *F&D Magazine*, Josh Lipsky discusses the role of goeconomics, as the line between economic policies and national security issues is increasingly disappearing. The webpage offers further reading on selected goeconomic topics published in *F&D Magazine*.

[The United States and its Creditors: Assessing Foreign Demand for US Assets>](#)

Foreign investors are crucial to financing the US current account, mainly through UST purchases. In this *Hutchins Center Working Paper*, the authors examine how demand shifts across investor groups have affected the Treasury market, focusing on weakening foreign demand in recent years. Lower reserve accumulation, goeconomic fragmentation and geopolitical tensions have reduced the appeal of USTs. Private investors are increasingly filling the gap, but their greater price sensitivity raises the risk of higher yield volatility over time.

DATA AND EVENTS CALENDAR

Date	Country	Data	Period	UniCredit	Consensus	Previous
31 Aug	GE	Consumer price index (% yoy)	Aug	3.0	-	2.8
01 Sep	EZ	Unemployment rate (%)	Jul	6.3	-	6.3

Marketing Communication

This publication/video constitutes a marketing communication of UniCredit S.p.A., UniCredit Bank Austria AG, Schoellerbank AG and UniCredit Bank GmbH (hereinafter jointly referred to as the “UniCredit Group”) is addressed to the general public and is provided free of charge for information only. It does not constitute investment recommendation or consultancy activity by the UniCredit Group or, even less, an offer to the public of any kind nor an invitation to buy or sell securities. The information contained herein does not constitute an investment research or financial analysis since, in addition to the lack of content, it has not been prepared in accordance with legal requirements designed to promote the independence of investment research, and it is not subject to any prohibition on dealing ahead of the dissemination of investment research.

UniCredit Group, including all its group companies may have a specific interest in relation to the issuers, financial instruments or transactions detailed herein. Relevant disclosures of interests and positions held by UniCredit Group are available at: [Conflicts of interest](#). Any estimates and/or assessments contained in this publication represent the independent opinion of the UniCredit Group and, like all the information contained therein, are given in good faith on the basis of the data available at the date of publication, taken from reliable sources, but having a purely indicative value and subject to change at any time after publication, on the completeness, correctness and truthfulness of which the UniCredit Group makes no guarantees and assumes no responsibility. Interested parties must therefore carry out their own investment assessments in a completely autonomous and independent manner, relying exclusively on their own considerations of the market conditions and the information available overall, also in line with their risk profile and economic situation. Investment involves risk. Before any transaction in financial instruments please refer to the relevant offering documents. It should also be noted that:

1. Information relating to the past performance of a financial instrument, index or investment service is not indicative of future results.
2. If the investment is denominated in a currency other than the investor’s currency, the value of the investment can fluctuate strongly according to changes in exchange rates and have an undesirable effect on the profitability of the investment.
3. Investments that offer high returns can undergo significant price fluctuations following any downgrading of creditworthiness. In the event of bankruptcy of the issuer, the investor may lose the entire capital.
4. High volatility investments can be subject to sudden and significant decreases in value, being able to generate significant losses at the time of sale up to the entire capital invested.
5. In the presence of extraordinary events, it may be difficult for the investor to sell or liquidate certain investments or obtain reliable information on their value.
6. If the information refers to a specific tax treatment, it should be noted that the tax treatment depends on the individual situation of the customer and may be subject to change in the future.
7. If the information refers to future results, it should be noted that they do not constitute a reliable indicator of these results.
8. Diversification does not guarantee a profit or protect against a loss.
